

MUHAMMAD ARSLAN

MERN Stack Developer & Software Engineer

Phone: 0318-4535106 | **Email:** imarslan7061@gmail.com

LinkedIn: www.linkedin.com/in/findarslan | **Github:** <https://github.com/imArslanJavaScriptor>

SUMMARY

Performance-driven Software Engineer with 3 years of experience specializing in the MERN Stack (MongoDB, Express.js, React, Node.js) ecosystem. Expert in architecting scalable database schemas, building highly secure RESTful APIs, and optimizing frontend rendering boundaries to deliver fluid, production-grade applications. Proven track record of accelerating delivery metrics in fast-paced startup environments by leveraging modern state management systems, clean NoSQL indexing, and automated engineering pipelines.

TECHNICAL SKILLS

Languages & Frameworks

JavaScript (ES6+), TypeScript, Node.js, React.js, Next.js

Database Management:

MongoDB, Mongoose ODM, NoSQL Data Modeling, Aggregation Pipelines, Query Optimization

State & API Layer:

Zustand, Redux Toolkit (RTK), RESTful API Design & Integration, WebSockets (Socket.io), TanStack Query

UI & Engineering Design:

Tailwind CSS, ShadCN UI, Bootstrap, Component-Driven Design, Responsive Micro-Interactions

DevOps & Tools

Git/GitHub, Automated CI/CD (GitHub Actions), Postman API Automation, Linux Core CLI

WORK EXPERIENCE

MERN Stack Developer

CypexSoft, Lahore (June 2025 – May 2026)

- Architected scalable MongoDB schemas and data models using Mongoose ODM, utilizing aggregation pipelines and custom indexes to slash database query response times.
- Engineered high-throughput, secure RESTful APIs and middleware services using Node.js and Express.js, seamlessly integrating automated data validation layers.
- Optimized end-to-end client-server operations by syncing backend services with Zustand state stores, utilizing shallow selectors to isolate rendering boundaries and reduce layout lag.

Frontend Developer

CypexSoft, Lahore (September 2023 – June 2025)

- Developed production-grade, highly responsive web interfaces using React.js, Next.js, and Tailwind CSS, translating complex UI design mockups into pixel-perfect code.
- Managed intricate client-side application states using Redux Toolkit (RTK) and TanStack Query, optimizing caching mechanics to decrease redundant network requests.
- Enforced clean code architecture and strict type-safety standards across the application layout by integrating TypeScript and robust peer code review workflows.

KEY PROJECTS

Adology AI — Data-Dense Marketing Analytics SaaS Platform

[MongoDB](#) | [Express.js](#) | [React.js](#) | [Node.js](#) | [Redux Toolkit](#) | [Tailwind CSS](#)

- Developed interactive analytics dashboards consuming scalable RESTful endpoints, leveraging complex MongoDB aggregation pipelines to process, filter, and deliver high-volume marketing traffic data seamlessly.
- Implemented ironclad client-side application state structures using Redux Toolkit and TanStack Query, optimizing backend data caching layers to drastically minimize layout network overhead and server strain.
